NOTES

- Engraving Available in Spanish, Japanese, French, Arabic, Portuguese and Chinese.

Powder coating is a technique that utilizes an electrostatic process and heat to create an exceptionally tough, impact-resistant coating on virtually any metal surface. Powder coating looks like paint but acts like an armor because it's resistant to impact, corrosion, heat, abrasion, fading, and weather. Due to the electrostatic application process, powder coating delivers a beautiful, uniform finish free of drips and flaws. As far as durability, powder coat is stronger than paint, the color selection is virtually unlimited, with high and low gloss, metallic, and clear finishes available.
